Gatherers and suppliers of wild berries, nuts, mushrooms, herbs and hive products.
We harvest our products in 17 regions of Russia.

We process and supply 2000 tons of products annually.

We supply our frozen and dried products in industrial and consumer package.

Sales Geography.
Russia, Europe, China, Kazakhstan.

Harvesting Geography.
The Omsk region, the Tomsk region, the Tyumen region, the Arkhangelsk region, the Kirov region, the Perm region, the Vologda region, the Republic of Karelia, the Komi Republic, the Pskov region, the Irkutsk region, the Altai region, the Murmansk region, the Buryat Republic.
Our goal is to strengthen the role of «Dikorosprom» as a major supplier of wild-growing (berries, nuts, mushrooms, medicinal herbs) remaining committed to our eternal values.

Our mission is to provide an opportunity for people around the world to enjoy our natural health products and to make them more and more available.

Our slogan - «The power of truth»
We believe that truth comes first and strive to prove it doing our business.

What we are heading for
All people are the children of the planet Earth that existed long before the humanity appeared. In our business we aim to share pure, not spoilt by GMO and chemicals, Earth’s energy accumulated in such truly precious planet’s gifts as wild berries, nuts, honey and medicinal herbs with people across the globe.

Why we do it
Sharing this clear positive energy with other people, we receive similar energy in the form of wellbeing, success, respect and happiness in response, improving our own lives through this good deal.
The company was founded in Omsk in 2009. Currently the company operates 3 production bases

**The Altai** — production base equipped with quick freezing and drying chambers, a freezer room and a berry sorting line where we process and produce 400 tons of frozen and 100 tons of dried products yearly.

**Omsk** — production base with storage facilities for 1000 tons of frozen and 300 tons of dried products. There is also a Russian-manufactured berry sorting line with the production capacity of 10 tons per day and a drying chamber processing 2000 kg of products daily.

**Vologda** — key, in terms of processing volume, production base of «Dikorosprom». Its cold store complex has room for 5000 tons of frozen products. The Polish berry sorting and processing line with the production capacity of 20 tons per day along with two automatic packers of frozen crop enable to fulfil orders of the largest federal-level manufacturers and retailers. The American electronic sorter makes it possible to provide our customers with computer-sorted berries.
Employment

Wild harvesting and processing is not only business that annually contributes significantly to the country’s economy in the form of tax revenues to the budgets at all levels. Through our work the most vulnerable segments of the population living in remote villages and rural areas of Russia, where the employment rate is extremely low, get an opportunity to earn respectable wages.

We are proud that through the activities of Dikorosprom, which brings together more than 10,000 collectors in 17 regions across the country, the number of unemployed people has decreased. It is an important social aspect for our company. Buying our products, you contributetocreating jobs.

Supporting culture and sports

Dikorosprom sets as one of its objectives the support of culture and sports development in Russia. That is why in 2014 our company became one of the general sponsors of such events as the Omsk City Day and Dance festival, competitions in extreme sports among the youth held in Omsk.

Charity

In 2015, our company created the charity fund «Indigo children» which is aimed to support gifted children including those from disadvantaged backgrounds who show extraordinary abilities in science, sport and culture. Buying our products you contribute to the fund and endow talented children. We believe that some of them may become the future Mendeleev, Kasparov and Tchaikovsky. Realizing that even the discovery or a single achievement of such a child can change our world for better inspires and enforces us.
Quality

We harvest and process organic products, growing without chemicalization away from the sources of pollution. We carefully control the quality of the products at each stage of production using state-of-the-art technology to assure that our products retain maximum of their health properties. All products are certified.
Cedar nut

In nutshell - Flecon bag, 30 kg
Nut kernels - vacuum bag, 5 kg
Consumer package - plastic container, 250 g

Honey

Wholesale package - hobbock, 3 kg
Consumer package - hobbock, 250 g

Fruit drinks

Lingonberry, cranberry, bilberry, blueberry, seabuckthorn, strawberry, cherry, blackcurrant - bottle, 500 ml

Consumer package, 25 g

A hot and cold beverage with a fine taste and aroma on the basis of willow herb perfectly quenches thirst and also has a large set of health effects.

This delicious aromatic and useful drink prepared of dried willow herb was widely popular as far back as in ancient Russia since the 12th century. And since the 13th century this traditional Russian drink was often called as “Koporskiy tea” (from the name of the settlement Koporye in Petersburg province where “Koporskiy tea” was first produced by the local monks). After some English sailors, who once visited Koporye, tried the willow herb drink, it was widely sold in England and other European countries (in Prussia and France willow herb tea from Russian Koporye was considered to be smuggled at that time). It is worth noting that Great Britain, an owner of huge tea plantations in India and on Ceylon, preferred willow herb “Russian tea” to the famous for its taste and worldwide popular Indian tea until the end of the 19th century. From the 17th to the 19th century holding an honorable place in the Russian foreign trade, willow herb considerably outpaced, in terms of export, such traditionally sought after on the world market Russian goods as gold, honey and hemp.

However, at the end of the 19th century being a powerful competitor of Indian tea and seriously undermining the economic power of the East-Indian Tea Company, Willow herb tea was forced out of the international market in short time due to the intrigues and malicious rumors on the part of Russia’s competitors in the tea trading segment. The First World War and the 1917 Revolution facilitated the gradual oblivion of Willow herb tea on the domestic Russian market as well.

Dikorosprom revives Russian traditions. We want more people to love this good-for-you beverage and drink it on par with Chinese and Ceylon teas, differently from which, Willow herb tea does not contain health-damaging caffeine, oxalic acid and purine bases.
